

## **25 MW Diesel Gas Turbine Frame 5**

**This is a Stand Alone Gasturbine Generator Set, currently used as Blackstart unit (therefor the low hours) that is currently running on Diesel instead of Gas.**

Conversion to Gas is not very hard, Seller will change the burners plus the fuel station and that's it basically. Most Gas turbines are Duel Fuel, so can either run on Gas or Diesel, in this case the owner chose Diesel.

This Plant is very attractive for us to sell, the owner really needs to sell it quick, preferred before Christmas this year it has to be dismantled.

Find below the total project that we offer on the Frame 5:

Projectmanagement (Purchase to Start Up)  
Transport, Lifting, Craning  
Manpower  
Temp Storage (if necessairy)  
Travel  
Equipment for opening concrete building frontside  
Packing for transport  
Modification to Gas  
Parts for inspection, foundation and transportation  
Repair 2nd Stage Nozzle refurbished (crack)  
HGPI Incl technicians (inspection prior to dismantling)  
Coupling Exchange to Flex (needs new coupling)  
Cabling replacement (can not relocate all cabling)  
Start Engine Inspection  
Inspection Replacement Plenum (recommended)  
Battery Exchange (recommended)  
Start Up
